Ledidi

Accessibility Statement on Ledidi Core

At Ledidi, we are dedicated to continually updating and improving the accessibility of our services to make them accessible to as many people as possible.

As part of this work, Ledidi's app designers and frontend developers use the WCAG 2.1 level AA standard as a checklist for our product development. Features and enhancements to Ledidi Core and Ledidi.com are implemented in accordance with WCAG 2.1 level AA to ensure we achieve a fully usable and user-friendly application. Ledidi leverages the frontend framework ReactJS, which has no limitations regarding the fulfillment of these requirements.

We strive to identify and rectify every accessibility barrier to ensure that all content in Ledidi Core and www.ledidi.com is fully accessible to all of our users. However, at any given time, it may be possible that some content does not fully adhere to the accessibility standards.

If you experience any accessibility issues or find parts of the solution or our content that are not accessible to you, please contact support@ledidi.com to report your issue, and we will help resolve it as soon as possible.
